

# Project Summary

**Commercial Property**  
**Dewitt, New York**

## Direct Push Services

Boreholes were advanced with a track mounted Geoprobe™ 6620DT rig using MC5 tooling. Twelve borings were made to approximately 8 feet below grade to collect continuous soil samples. Several of the borings were performed inside of the building and required penetrating a concrete floor.

## Project Overview:

As part of a potential real estate transaction an environmental investigation was required to evaluate potential impacts to the site from historical operations. Soil samples were collected from locations outside and inside of a building at the property.
